

Getting started with Recert

Recert runs an access review of your Jira projects and Confluence spaces. It works out who can see or administer each one and why, sends each review to the person who owns that project or space, records every keep / revoke / exception decision with a reason and a timestamp, and exports the evidence for your auditor.

A one-minute demo video of the whole flow is at <https://recert.dev/getting-started.html#demo>

How to read the pictures. The red numbers in each picture match the numbered steps next to it. Click any picture to open it full size.

Who does what. A **Jira administrator** takes snapshots, creates campaigns, reopens signed reviews and exports evidence. A **reviewer** (the project lead or space administrator) only decides the lines assigned to them and signs off. Nothing in Recert changes anyone's access; your administrators carry out revocations in Jira or Confluence as usual.

Before you start. Install Recert from the Atlassian Marketplace on your Jira Cloud site and accept the requested permissions. Confluence spaces on the same site are reviewed from this one installation; you do not need a separate Confluence install.

Messages appear at the top of the Recert page, not next to the button you clicked. If nothing seems to happen, scroll up.

1. Open Recert

The screenshot shows the Jira interface. In the left sidebar, the 'Apps' section is highlighted with a red box and a red circle with the number 1. Below 'Apps', the 'Recert' app is listed under 'Your apps' and is also highlighted with a red box. In the main content area, the 'Recert' app is selected, showing the 'Recert — access reviews' page. Below this, the 'My reviews' section is highlighted with a red box and a red circle with the number 2. It contains a table with columns: Resource, Campaign, Owner, Due, Decided, Status, and a 'Review' button for each row.

Resource	Campaign	Owner	Due	Decided	Status	
Space MFS	Nag test campaign	space-admin	2026-09-20	0/2	open v1	Review
Project AS	Nag test campaign	lead	2026-09-20	1/1	signed v1	Review
Project KAN	Nag test campaign	lead	2026-09-20	0/2	open v1	Review
Space MFS	Q3 2026 access review	space-admin	2026-09-20	0/2	open v1	Review
Project AS	Q3 2026 access review	lead	2026-09-20	0/1	open v1	Review
Project KAN	Q3 2026 access review	lead	2026-09-20	0/2	open v1	Review
Space MFS	Test campaign	space-admin	2026-09-20	0/2	open v1	Review
Project AS	Test campaign	lead	2026-09-20	1/1	signed v1	Review
Project KAN	Test campaign	lead	2026-09-20	0/2	open v2	Review

1. In Jira's left sidebar, open **Apps**, then click **Recert**.

2. **My reviews** lists every review assigned to you, with its campaign, due date, how many lines are decided, and its status (*open* or *signed*). Click **Review** on a row to open it.

On a fresh install the tables are empty and Recert says "No campaigns yet. Take a snapshot, then create one." That is expected; go to step 2.

2. Take a snapshot (Jira administrator)

A snapshot records who has access to every project and space at this moment, and through which group, role or permission. Every review is made against a snapshot, so the evidence can be reproduced later.

Campaigns

Preview plan

Create campaign from preview

1 Take a new snapshot (background)

Run daily job now (admin)

Name	Created	Due	Signed	
Nag test campaign	2026-09-06	2026-09-20	1/3	Evidence CSV
Q3 2026 access review	2026-09-06	2026-09-20	0/3	Evidence CSV
Test campaign	2026-09-06	2026-09-20	1/3	Evidence CSV

1. Scroll down to **Campaigns** and click **Take a new snapshot (background)**.

Recert

Recert — access reviews

- 2  Snapshot job started (0f7623da-9d0b-490a-84c4-7c0c98ae99f0). It becomes usable when its status is ready.

My reviews

2. A blue message appears at the top of the page: "*Snapshot job started ... It becomes usable when its status is ready.*" The snapshot builds in the background, usually in a minute or two (longer on large sites). There is nothing else to click.

If you create a campaign before the snapshot is ready, Recert answers "*no ready snapshot; take one first*". Wait a minute and try again. Snapshots that no campaign uses are deleted automatically after 90 days.

3. Plan and create a campaign (Jira administrator)

A campaign sends one review per project or space to its owner.

Campaigns

Preview planCreate campaign from previewTake a new snapshot (background)Run daily job now (admin)

1. Type a name for the campaign, for example *Q4 2026 access review*.
2. Optional, **Nag issues in project**: type a Jira project key (for example `AS`). Recert then creates one Jira issue per review in that project, assigned to the reviewer, so Jira's own notifications remind them. Each issue is resolved automatically when its review is signed off.
3. Click **Preview plan**. A **Plan preview** table appears below the campaign list, with one row per project and space and its default owner: the **project lead** for Jira projects, the first **space administrator** for Confluence spaces. A resource with no eligible owner is assigned to you and marked *unowned*.

Plan preview (3 resources, snapshot 374995fe...)

Untick a resource to leave it out of this campaign. Pick a person to override the default owner. Unowned resources fall back to you.

Include	Resource	Default owner	People / listed	Override owner
4 ☒	Project KAN — My Kanban Space	Zeke (lead)	2 / 22	5 Keep default
☒	Project AS — Attest Spike	Zeke (lead)	1 / 22	Keep default
☒	Space MFS — My first space	Zeke (space-admin)	2 / 8	Keep default

4. **Include**: switch a row off to leave that project or space out of this campaign.
5. **Override owner**: pick a person to send that review to someone other than the default owner.

Quarterly access review

Nag issues in project (optional, e.g. AS)

Preview plan **Create campaign from preview** Take a new snapshot (background) Run daily job now (admin)

6

6. Scroll back up and click **Create campaign from preview**. If you skipped the preview, the same button reads **Create campaign from latest snapshot**.

Recert confirms how many reviews it created. Reviews are due 14 days later. Each reviewer now sees their reviews under **My reviews**, and the campaign appears in the **Campaigns** list with a *Signed* count.

4. Review and sign off (reviewer)

Open **Apps** → **Recert**, find the row under **My reviews** and click **Review**. A review of a Jira project can also be opened from the **Recert** tab inside that project.

Space MFS: My first space

Campaign **Test campaign** · due 2026-09-20 03:26 UTC · owner [redacted] (space-admin) · version 1

i 2 line(s) to decide, 2 undecided. Revoke and Exception need a reason: type it below, then click the verdict.

2 Reason (required for Revoke / Exception)

People to certify

Person	Capability	Why they have it	Decision
1 Zeke	Administer	path unavailable	Undecided
Zeke	See	path unavailable	Undecided

3 **Keep** **Revoke** **Exception**
Keep **Revoke** **Exception**

4 Sign off (0/2 decided)

- 1. People to certify** lists each person with access, what they can do (*See* or *Administer*) and *Why they have it* (the group, role or permission that grants it).
- 2.** To revoke or record an exception, first type the reason in the **Reason** box.
- 3.** Then click **Keep**, **Revoke** or **Exception** on that person's line. Keep needs no reason. Each decision is saved with your name and the time (UTC).
- 4.** When every line is decided, click **Sign off**. It shows how many lines are decided and stays greyed out until all are. Decisions are then locked.

Listed, not certified

Apps, portal customers, anonymous access and conditional access are recorded in the evidence pack but are not decided line by line.

Account	Kind	Capability	Why
Attest	app	Administer	
Attest	app	See	
Chat Notifications	app	Administer	
Chat Notifications	app	See	
Microsoft Teams for Confluence Cloud	app	Administer	
Microsoft Teams for Confluence Cloud	app	See	
Opsgenie Incident Timeline	app	See	
Opsgenie Incident Timeline	app	See	

5. Below the Sign off button, **Listed, not certified** shows apps, portal customers, anonymous access and conditional access (for example "the assignee of an issue"). They are included in the evidence, but you do not decide them.

Only a Jira administrator can **Reopen** a signed review. Reopening creates a new version and keeps the earlier decisions visible as *Superseded*, so evidence is never silently changed.

5. Export the evidence (Jira administrator)

Name	Created	Due	Signed	
Nag test campaign	2026-09-06	2026-09-20	1/3	
Q3 2026 access review	2026-09-06	2026-09-20	0/3	1
Test campaign	2026-09-06	2026-09-20	1/3	

1. In the **Campaigns** list, click **Evidence CSV** on the campaign's row.

Evidence: Test campaign (3 decision rows, 52 listed accounts)

2 Jira project key for the evidence issue (e.g. AS)

3 Attach CSV files to a new Jira issue

4 Files: recert-test-campaign-decisions.csv, recert-test-campaign-listed.csv. Preview of the decisions file:

```
1 product,resource_key,resource_name,owner_id,owner_source,unowned,assignment_status,version,principal_id,display_name,capability,\n2 jira,AS,Attest Spike [REDACTED] lead,false,signed,1 [REDACTED]\n3 jira,KAN,My Kanban Space [REDACTED] lead,false,open,1 [REDACTED]\n4 jira,KAN,My Kanban Space [REDACTED] lead,false,open,1 [REDACTED]
```

2. An **Evidence** section appears. Type the key of the Jira project where the evidence should be filed.
3. Click **Attach CSV files to a new Jira issue**. Recert creates an issue named *Evidence pack: <campaign>* in that project with both files attached. Download them from the issue and give them to your auditor.
4. The two files and a preview of the first are shown here so you can check them before attaching:
 - `<campaign>-decisions.csv` : every certified line with its decision, reason, who decided and the sign-off.
 - `<campaign>-listed.csv` : the accounts that were listed but not certified.

Reminders and the daily job

Once a day Recert resolves reminder issues for reviews that were signed off and refreshes display names from Atlassian. **Run daily job now (admin)**, next to the snapshot button, runs the same job immediately; the message it prints is the job's summary.

Where the data lives

Everything Recert stores stays in your Atlassian site's Forge storage. The app makes no calls outside Atlassian and the vendor has no access to your data. Details are in the [privacy policy](#) and the [security policy](#).

Troubleshooting

You see	Cause and fix
Nothing happens when I click a button	The message is at the top of the Recert page. Scroll up.
<i>Only Jira administrators can create campaigns</i>	Snapshots, campaigns, reopen and evidence export need Jira administrator rights. Ask an admin, or grant the role.
<i>no ready snapshot; take one first</i>	No snapshot has finished yet. Click Take a new snapshot (background) , wait a minute or two, then create the campaign.
<i>Nothing assigned to you</i>	You do not own any review in an open campaign. Owners are the project lead or space administrator unless an admin overrode them.
A project or space is missing from the preview	It was not in the latest snapshot. Take a new snapshot after creating projects or spaces.
Sign off is greyed out	Some lines are still <i>Undecided</i> . The button shows how many are decided.
<i>Why they have it says path unavailable</i>	The access path could not be reconstructed for that line (typical for some team-managed projects). The decision still records normally.
The reminder issue was not created	The nag project key must be a project the app can create issues in; check the campaign creation message for warnings.
